Description

Furniture and Ornamental Metalwork from The Concrete Studio provides the client with something that is built to last and will provide long lasting functional and durable joy in homes, offices, and contemporary remodels. The Studio provides a wide range of design styles and uses various traditional and non-traditional materials to expand the creativity and technological advances in the design and in Studio Furniture. Constantly

pursuing alternative options in steel, stainless steel and non-ferrous metals and finishes, this design freedom creates design options from the home and office to the outdoor garden and patio spaces.

The Concrete Studio designs, fabricates and delivers custom furniture and custom metalwork with specific detailed requirements that blend well into a style that is Unique.

Functional, artistic, and durable each piece is custom designed and handcrafted in our Dallas Studio. Focused product designs are for the home, bath, outdoor/patio or commercial and hospitality spaces.

The furniture and custom metalwork that are built here are designed with a detailed set of requirements sometimes using our own unique style while combining the style of the customer. Various considerations will be used to determine which materials will be used. The Studio usually starts with a sketch, and then produces a set of drawings in 3D that will be approved, and then used to fabricate the furniture that will provide a lifelong functional and artistic piece, sometimes having the vision of the Client and artistic touch and style of the Artisan combined.

Key features of our furniture and Ornamental Metalwork include our unique ability to generate an unlimited range of custom products, to meet demanding style requirements. Choose from existing designs or request made-to-order framework. The choice is yours.

Materials and Dimensions

The Concrete Studio uses a multitude of materials in its design and fabrication. By integrating our concrete tabletop products into our sleek metal furniture and base designs we have the ability to create a product that is like no other. Combinations of stainless steel, mild steel, copper, nickel, concrete and glass are just some of the materials used to design our custom metal furniture. Furniture should not only be a functional piece, but something that blends into its environment. We work closely with designers and homeowners to ensure that the materials used are pleasing to the eye and that the finished piece is something that is unique, custom and retains lasting beauty.

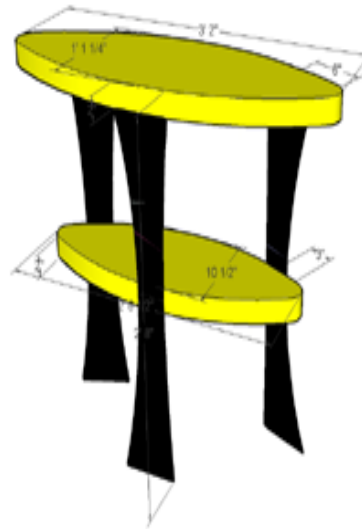

Design

Designs are thought out carefully with no obstacles in mind unless budget dictates otherwise. Design influences sometimes use ideas from contemporary art, architecture, automotive design, nature, and modern jewelry. The Concrete Studio prides itself on having the ability to bridge the gap between conceptual design and fabrication. We produce a set of sketches or drawings that enables the client to really understand and grasp the concept before fabrication begins; it's a collaborative approach that works well in designing custom artistic furniture.

Custom finishes are also available, including several unique embedded

Finishes

The Concrete Studio uses dozens of different types of finishes that are both artistic and durable. In many cases the client prefers a natural finish in that of the many types of steel or stainless steel we use. It has a natural simple element that other finishes cannot provide. Stainless steel comes in many varieties and we also blend it with our concrete tabletops to provide some of the most durable furniture that can be found.

Furniture and Ornamental Metalwork
Unique Artistic Furniture and Metal.

Company Profile

The Concrete Studio specializes in designing and fabricating custom concrete and metal furniture, unique concrete countertops, concrete tabletops, fireplace hearths and surrounds.
